

TransLink is looking for skilled, motivated transportation planners or engineers to join TransLink's Bus Priority Programs team. **We are hiring for two positions: Planner and Senior Planner.**

The Bus Priority Programs team is responsible for planning, conceptual design, and funding of bus priority measures ranging in scale from individual hotspot treatments to full corridors. We are a team of planners, engineers, data scientists, project coordinators, and public affairs staff.

The **Planner** will develop small-to-medium scale plans and projects for the Bus Speed and Reliability (BSR) Program. The BSR program focuses on strategic placement of bus bulbs, queue jumps, signal improvements, and bus lanes to help buses get through the most congested streets. The work involves data analysis, conceptual design, and stakeholder engagement.

The **Senior Planner** will lead planning and concept design processes for future RapidBus routes. RapidBus is an arterial-and-highway bus service that features high frequency and span, limited stopping bus priority measures, and enhanced passenger amenities. The work involves RapidBus project development and alignment planning, as well as concept design for bus priority measures, including directing consultants performing more complex analysis and design. The position may also lead or support other bus priority projects in the department.

Experience with bus priority measures, street design, managing consultants, coordinating with internal stakeholders, and leading working groups with municipal partners are assets for the Planner and Senior Planner position.
